SUMMARY

Senior software developer with more than 20 years of experience and a background in intensive technical training. Combines practical software engineering, automation and application security with structured preparation and hands-on exercises. Brings industry experience and knowledge-sharing skills to vocational IT education.

KEY ACHIEVEMENTS

- Built automated deployment and testing tools to reduce repetitive manual work
- Implemented application security through authentication, authorisation, secure interfaces and validation
- Developed a cross-technology test framework for regulated medical and laboratory software

SELECTED FREELANCE WORK EXPERIENCE

02/2026 – present **Confidential Clients**

Senior Full-Stack Developer

Practical software engineering for safety-critical management systems, combining domain modelling, automated testing and application security.

- Developed microservices and a Blazor interface, including an AI user portal.
- Applied DDD, Clean Architecture and TDD to organise implementation and verify behaviour.
- Implemented two-factor authentication, authorisation, secure interfaces and input validation.
- Created guided, interactive UI tours with test data; assessed independent task completion and user feedback to verify understanding and improve explanations.

09/2015 – 12/2025 **MAN Truck & Bus,** Munich

Senior Software Developer

Developed a modular platform and shared practical engineering knowledge through intensive training, coaching and cross-team collaboration.

- Planned employee training with exercises; coached colleagues in design patterns, testing and code reviews.
- Migrated software to .NET Core microservices and REST; supported network communication and troubleshooting.
- Introduced CI/CD and test frameworks to automate deployment and strengthen code quality; implemented application security.

01/2013 – 08/2014 **Pixel,** Munich

Software Developer

Developed solar-system planning software, UI concepts and mobile support; planned and evaluated unit, integration and system tests.

08/2010 – 12/2012 **Rohde & Schwarz,** Munich

Senior Software Developer

Built an SDR development framework using a domain-specific language and C++ generators to automate software customisation.

02/2010 – 04/2011 **T-Systems,** Munich

Software Developer

Developed deployment automation for large BizTalk solutions across multi-server environments; configured target systems and validated integration.

SELECTED CONSULTING PROJECTS

Selected consulting projects carried out alongside other freelance engagements.

02/2025 – 12/2025 **Research, Aerospace, Defense,** Germany

Prompt Engineer, Context Engineer, AI System Architect

Designed and implemented a secure, state-oriented AI architecture for aerospace research, with validation of AI-generated results.

- Developed and orchestrated multi-agent systems; modelled prompts and context for reliable behaviour.

03/2020 – 09/2023 **Roche,** Penzberg

Test Manager

Designed and evaluated test procedures for regulated medical and laboratory software; developed a cross-technology test framework.

- Defined test strategy and methodology; validated systems against health-authority requirements with developers and domain experts.

11/2017 – 02/2019 **ASM Assembly Systems,** Munich

Senior Software Developer

Developed RPC services for PCB-assembly logistics; defined, executed and reported cross-system tests and created executable runbooks.

MORE PROJECTS **www.linkedin.com/in/stefan-busch-b3027a261**

TECHNICAL TRAINING

Planned and delivered intensive Microsoft BizTalk bootcamps and employee training at MAN Truck & Bus, combining structured preparation with practical exercises. Guest speaker on BizTalk at the University of Karlsruhe.

SKILLS

Training & Collaboration

- Technical training and mentoring
- Training plans and exercises
- Code reviews and knowledge transfer

Software Development

- C#, .NET Core, .NET Framework
- C / C++, Python, JavaScript
- Blazor, WPF, SQL databases

Security & Networks

- Two-factor authentication
- Authorisation and input validation
- Secure interfaces
- Application networking
- Network troubleshooting

Software Design

- DDD, design patterns, Clean Code

Automation & Quality

- CI/CD and deployment automation
- Test strategy and test management
- Unit, integration and system tests
- TDD, Git, Docker
- Linux and Windows

AI

- Multi-agent systems, prompt design

EDUCATION

10/1985 – 08/1990 **Diploma** in Technical Physics, FH Munich

10/1981 – 05/1984 **Journeyman's certificate**, Central Heating & Ventilation Engineering
